

Amendments to the Claims

The listing of claims will replace all prior version, and listings, of claims in the application.

Listing of Claims

Claim 1 (currently amended):

A method for efficiently matching resources required to establish business and business facilities through the Internet, said method comprising:

providing an electronic hub system configured to communicate with at least one resource provider;

communicatively coupling said resource provider with said electronic hub system;

examining a plurality of items of said resource provider to certify said resource provider as being able to provide at least one selected from the group consisting of capital, land, building rental, management group, rules and regulations, administrative ideas, and business plans and to confirm said resource provider's reliability;

storing a record of said certified resource provider in said electronic hub system;

[[and]]

matching said resource provider according to said record of said resource provider with other certified resource providers having a record saved in said electronic hub system, comprising:

collecting and analyzing records of said certified resource providers; and

implementing matches and forming business plans for said certified resource provider based on similarities to business models of the other certified resource providers to enable efficient obtainment of resources necessary for establishing a company or a factory, wherein said business plans are created or selected from said electronic hub system based on request of said certified resource provider [[.]]; and

sending and displaying said business plans to said certified resource provider for
deciding whether said certified resource provider takes part in the said business plans.

Claim 2 (previously presented):

The method according to claim 1 further comprising establishing an electronic contract for said resource provider.

Claim 3 (original):

The method according to claim 1, wherein said electronic hub system comprises an electronic hub and a data storage device.

Claim 4 (original):

The method according to claim 3, wherein said data storage device comprises a plurality of databases built therein.

Claim 5 (previously presented):

The method according to claim 4, wherein said databases comprise:

- a resource database and said record of said resource provider stored therein;
- a certified resource database having said record of said certified resource provider certified with said items;
- a business model database having a plurality of business models of enterprises; and
- a plan database having at least a business plan combining said record of said resource provider with said business models of enterprises.

Claim 6 (previously present):

The method according to claim 5, wherein said matching step further comprises a step of
defining a priority of said business plans according to similarities to said business
models of said certified resource providers;
saving said business plans in said electronic hub system;
sending said business plans to said resource providers certified; and
displaying said business plans.

Claim 7 (original):

The method according to claim 1, wherein said resource provider comprises a capital
provider.

Claims 8-10 (canceled)

Claim 11 (original):

The method according to claim 1, wherein said items comprises an official document related
to said resource provider.

Claim 12-13 (canceled)

Claim 14 (original):

The method according to claim 1, wherein said communicating step comprises:
logging in said electronic hub system;
selecting a class for said resource provider;
selecting a scope for said resource provider;
assigning an identification number to said resource provider; and

saving said record of said resource provider in said electronic hub system.

Claims 15-25 (canceled)

Claim 26 (currently amended):

A system for efficiently establishing companies and factories through a world-wide Internet, said system comprising:

a data storage device having a plurality of databases built therein for storage records related to resource providers or business models; and

an electronic hub electronically connected to said data storage device for examining and matching said resource provider, said electronic hub configured to cooperate with said data storage device to:

communicate with a resource provider;

examine a plurality of items of said resource provider to certify said resource provider as being able to provide at least one selected from the group consisting of capital, land, building rental, management groups, regulation, administrative ideas, and business plans and to confirm said resource provider's reliability;

save a record of said certified resource provider; and

match said resource provider according to said record of said resource provider with other certified resource providers having a record saved in said data storage device, comprising:

collecting and analyzing said resource providers certified; [[and]]

implementing matches and forming business plans for said certified resource providers according to similarities to business models of said other certified resource providers, wherein said business plans are created or selected from said electronic hub system

based on request of said certified resource provider [[.]]; and

send and display said business plans to said certified resource providers for
deciding whether said certified resource providers take part in the said business plans.

Claim 27 (previously present):

The system of claim 26, wherein said electronic hub is further configured to establish an electronic contract of said resource provider.

Claim 28 (previously present):

The system of claim 26, wherein said plurality of databases comprise:

- a resource database for registering said resource provider;
- a certified resource database having said record of said certified resource provider with said items;
- a business model database having a plurality of business models of enterprises; and
- a plan database having at least a business plan combined said record of said resource provider with said business models of enterprises.

Claim 29 (previously present):

The system of claim 28, wherein said electronic hub is further configured to:

- define a priority of said business plan according to similarities to said business models of said certified resource providers;
- saving said business plans in said plan database;
- sending said business plans to said certified resource providers; and
- displaying said business plans.

Claim 30 (previously present):

The system of claim 28, wherein said electronic hub is further configured to:

- log in said electronic hub for said resource provider;
- select a class for said resource provider;
- select a scope for said resource provider;
- assign an identification number to said resource provider; and
- save said record of said resource provider in said resource database.

Claims 31-39 (canceled)
